

## When to Get Tested

### Tracking and Tracing contacts of employees who test positive for SARS-CoV-2

#### BASIC RISK ASSESSMENT

Ask if they had ALL the following with the positive employee:

QUESTIONS	YES	NO
More than 15min of contact		
Face-to-face contact		
Contact at a distance of less than 1m		
Contact in a closed room		
Contact 2 days before or up to 10 days after the person tested positive for Covid or had suggestive symptoms?		

\*Please refer to our Flowchart A and B for more information on this process

If the employee answers Yes to all of these questions and both parties (the employee in questions and the employee infected with SARS-CoV-2) did not wear masks covering their noses, then the employee in question should be considered a moderate risk contact. They should be asked to quarantine for 14 days.
